BLOOD TESTS FOR HELMINTHIC THERAPY

Profile should ideally contain the following but we do not absolutely require every one of these tests. They vary from country to country. But the tests will include most of the following, particularly iron levels.

Biochemistry:

Sodium (Na)
Potassium (K)
Urea
Creatinine
Calcium (Ca) Adjusted Calcium (Calculated)
AST (Aspartate Aminotransferase) and/or ALT (Alinine Aminotransferase)
Total Protein
Albumin
Bilirubin
Alkaline Phosphatase
Iron
Unsaturated iron binding capacity (UIBC)
Transferrin saturation
Vitamin B12
Folate
CRP (Carbohydrate Reactive Protein)

Full Blood Count:

ESR (erythrocyte sedimentation rate)
Red blood cell count
White blood cell count
Haemoglobin
Packed cell volume or haematocrit
Mean cell volume
Mean cell haemoglobin
Mean cell haemoglobin concentration
Platelets
Neutrophils
Eosinophils
Lymphocytes
Monocytes
Basophils
Red Cell Distribution Width (RDW)

If signs of hyperglycemia then Fasting Blood Sugar as well.
